  <section id="science">
    <div class="section-title">
```

```
      <i class="fa-solid fa-brain"></i>
      <h2>The Science of Sleep</h2>
    </div>
    <p class="section-intro">
      Sleep is not passive downtime. It is active biological recovery, memory processing, emotional regulation, immune restoration, and cognitive preparation for the next day. For university students, that means sleep affects studying, test performance, emotional balance, concentration, motivation, and even how well new information sticks.
    </p>

    <div class="callout">
      <strong>Key idea:</strong> Repetition matters in learning, and this guide intentionally repeats the most important points in different formats: explanation, myth busting, practical advice, videos, and self-testing. That makes the resource more educational, clearer, and easier to remember.
    </div>

    <div class="grid-2">
      <div class="info-box">
        <h3>How sleep supports learning</h3>
        <p>
          During the night, the brain cycles through light sleep, deeper non-REM sleep, and REM sleep. Deep sleep supports physical restoration and immune function, while REM sleep plays a major role in memory consolidation, emotional processing, and integrating what you learned during the day.
        </p>
      </div>
      <div class="info-box">
        <h3>Why students struggle</h3>
        <p>
          University routines often disrupt healthy sleep: irregular schedules, stress, screen exposure, caffeine, assignment pressure, social commitments, and inconsistent wake times. The result is often a cycle of low energy, poor focus, late-night studying, and even worse sleep the next night.
        </p>
      </div>
      <div class="info-box">
        <h3>Circadian rhythm matters</h3>
        <p>
          Your body clock is shaped by light, activity, meals, and consistency. Morning light helps anchor wakefulness, while late-night light, especially from screens, can delay melatonin release and make falling asleep harder.
        </p>
      </div>
      <div class="info-box">
        <h3>Why “just push through” fails</h3>
        <p>
```

Sleep debt does not only make you tired. It can reduce reaction time, attention, memory encoding, mood regulation, and self-control. That is why poor sleep can make studying take longer even when you are spending more time doing it.

Most repeated lesson in this guide: better sleep does not usually come from one miracle trick. It comes from consistent habits repeated daily: regular timing, less light at night, morning light, caffeine control, a calmer wind-down, and a room that supports sleep.

</section>

<section id="videos">

<h2>Sleep Learning Videos</h2>

These videos reinforce the same key ideas from different angles: science, habit design, emotional health, and practical tools. That repetition makes the guide more resourceful and easier to learn from.

<h3>1. Sleep Is Your Superpower – Matt Walker</h3>
<iframe src="https://www.youtube.com/embed/5MuIMqhT8DM" title="Sleep Is Your Superpower" allowfullscreen></iframe>
A strong introduction to why sleep matters for memory, performance, and long-term health.

<h3>2. Tools for Optimizing Sleep – Andrew Huberman</h3>
<iframe src="https://www.youtube.com/embed/h2aWYjSA1Jc" title="Tools for Optimizing Sleep" allowfullscreen></iframe>
Practical science-based tools for improving sleep-wake timing and daily rhythm.

<h3>3. Tips to Fall Asleep Faster – Andrew Huberman</h3>
<iframe src="https://www.youtube.com/embed/qMjuUsizAqg" title="Tips to Fall Asleep Faster" allowfullscreen></iframe>
Useful habit-based recommendations that connect directly to student routines.

  </section>

  <section id="myths">
    <div class="section-title">
      <i class="fa-solid fa-fire"></i>
      <h2>Common Myths vs Better Facts</h2>
    </div>
    <p class="section-intro">
      Click each myth to expand it. This section intentionally revisits the same core themes
from a different angle: routine, recovery, caffeine, screens, naps, and the false belief that
sleep can be ignored without consequences.
    </p>

    <div class="accordion">
      <div class="card" onclick="toggleCard(this)">
        <div class="card-title">
          <span>Myth 1: I can catch up on sleep fully on weekends.</span>
          <i class="fa-solid fa-chevron-down"></i>
        </div>
        <div class="card-content">
```

Weekend recovery can help a little, but it usually does not fully undo a week of irregular sleep. You may feel slightly better, but your body clock often stays inconsistent, making Sunday night and Monday morning harder again.

```
    </div>
  </div>

  <div class="card" onclick="toggleCard(this)">
    <div class="card-title">
      <span>Myth 2: All-nighters help before exams.</span>
      <i class="fa-solid fa-chevron-down"></i>
    </div>
    <div class="card-content">
```

Staying up late may increase total study time, but it often reduces how well you learn, remember, and retrieve information. Sleep supports memory consolidation, so cutting sleep can weaken the value of the studying you just did.

```
    </div>
  </div>

  <div class="card" onclick="toggleCard(this)">
    <div class="card-title">
      <span>Myth 3: Caffeine fixes tiredness.</span>
      <i class="fa-solid fa-chevron-down"></i>
    </div>
    <div class="card-content">
```

Caffeine can temporarily increase alertness, but it does not replace lost sleep. It may also linger in the body for hours and interfere with deep sleep later, especially when used late in the day.

```
    </div>
  </div>

  <div class="card" onclick="toggleCard(this)">
    <div class="card-title">
      <span>Myth 4: Screens before bed do not matter if I am already tired.</span>
      <i class="fa-solid fa-chevron-down"></i>
    </div>
    <div class="card-content">
```

Bright screen light can delay melatonin release and keep the brain mentally activated. Even when you feel sleepy, screen use can increase sleep latency and make the quality of sleep worse.

```
    </div>
  </div>
